- › wide choice of options  
and customizations
- › advertising area  
at the back of the chair

Compatible ✓ new ropeways ✓ existing ropeways

## DESCRIPTION

LP EVO chairs are upgrades of LP chairs.

This premium version is the successful result of on-site feedbacks over the years.

## FEATURES & BENEFITS

### A premium chair

Seating comfort, sobriety and elegance.  
Wide choice of options and customisations.

### User safety and comfort

New damping technology by filtering low and high frequencies for more comfort and greater silence.

Safer and more comfortable boarding and exiting with the increased safety bar opening angle, optimal backrest inclination and a re-designed safety bar geometry.

No dividers between the seats, for an unrivalled seat width and a more comfortable chair. Highest backrest on the market.

Use of deformable foam membranes for greater safety and comfort when closing the bubble and the safety bar.

Less force required to open and close the bubble.

### Maintenance

The mechanical components of the chair are easily accessible thanks to quick-release openings, which simplify maintenance operations.

The seats alignment facilitates cleaning and prevents the accumulation of snow between the backrests.

### Design

Redesign of the cover plate at the back of the chair.

The surface, now continuous, is better suited to advertising stickers and other communication material.

New design for the side walls, which are now more contoured and made of foam for enhanced comfort and safety, also offering more elbow room.

Bubble geometry redesigned to offer optimal space.

## OPTIONS
