CARRIER

SkyRider range

FEATURES & BENEFITS

► **Concept** based on the idea of an attraction operating in a unique, natural environment.

► **Design:** exclusive and radical design to diversify multi-season mountain activities.

► **Performance**

Cabins specifically designed to combine new sensations with safety.

► **Safety**

- In complete safety, in these cabins users take their places as they would on a treetop adventure course or a rollercoaster
- All evacuation equipment is present on these carriers

► **Use:** the suspension, grip and profile of the carrier are identical to the ropeway model for easy insertion into the line.

RANGE

► **SkyRider EVO**

In the SkyRider EVO cabin, standing passengers wear harnesses and are free to move around in a cabin that is open to the four winds.

The floor is made of grating and users get a real feeling of flying.

► **SkyRider Crystal**

In the SkyRider Crystal cabin, passengers are seated as in a rollercoaster, with their legs hanging freely, enjoying the view. The individual seats move, like a flight simulator, and amplify movements to enhance the sensations.

The vehicle is equipped with an enclosed cell for the cabin attendant.
